Details of field of expertise of Shield Technology:

Cementitious Coatings for Restoration & Protection of Hydraulic Structures

Shield Technology is able to offer its services for economical large and small scale cementitious polymer coating applications, using the renown Strong pumping equipment, supplied by Ontrak.

Substrates are repaired with appropriate mortars or a geofabric laid for earthen structures. The coating is then applied. The Strong Super 80 can coat more than 2,000 m² at 3 mm thick within a day.
